

DATA CAPTURED IMPROVED WORKFLOW INFORMATION REPORTED

CAPTURE

CAPTURE DATA ON PHONE, TABLET OR WITH A DIGITAL PEN AND PAPER

Silhouette is a unique single solution that enables you to publish your business forms for use on a tablet or phone or use with digital pen and paper.

The Silhouette TabLite application for tablet and phone provides a really easy platform for users to complete, save and send business forms - linking seamlessly with your backoffice systems.

Silhouette digital pen and paper is equally seamless. Using normal paper with a layer of dot pattern printed on top and our digital pen, forms and data are instantly sent via pairing with a mobile device.

All solutions enable users to attach short videos, photos or PDF and GPS coordinates to all forms.

WORKFLOW

WEB BASED PLATFORM GIVES YOU TOTAL CONTROL

Silhouette enables administrators to manage all transactions and validate the data captured through a system of workflow and filters.

Each login user has a set of access rights defined, and its action are traceable from the log report. They can edit text entered, or create new records and assign them to other input users.

The Silhouette web portal is a document repository for paper forms, scanned forms, or electronic forms. Search filters are customised for each document. Administrators create a PDF of multiple selected records and email or print it.

ANALYSE

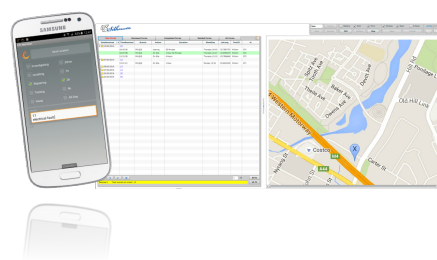

ALL TRANSACTIONS ARE INTEGRATED INTO A BI DATA MODEL FOR ANALYSIS

Transactions for each form are optimised for data capture. To analyse them properly, Silhouette feeds a Business Intelligence data model where dashboards or more interactive analytical discoveries are available.

Because each form is a custom development created with the Silhouette software platform, the reporting and analytical data model is also customised to the business needs. Our team with many years of experience in data analysis will propose, design and support your analytical applications.

KEY BENEFITS AT A GLANCE

- Web Based solution for digital form design and implementation
- Design from scratch, or model on existing forms.
- Configure each form individually
- Supports input from digital pens and smartphones or tablets
- Support for multiple users
